
MEMORANDUM

TO: Karen Castellanos-Brown

FROM: Nancy Cole and Quinn Moore

SUBJECT: AG-3198-D-09-0068 Modeling of High Risk Indicators of
Certification Error in the National School Lunch Program:
Notification that analysis files are complete

DATE: 3/21/2011

Creation of analysis files is complete for the **Modeling of High Risk Indicators of Certification Error in the National School Lunch Program (NSLP)**. This memo describes the contents of the files.

I. ANALYSIS FILES

Three analysis files were constructed for the study. These files are described below and listed in Table 1. The output of SAS Proc Contents for each file is included as Appendix A.

APEC_analysis is the primary analysis file. This file includes three measures of certification error: administrative certification error, household reporting error, and total certification error. Certification error rates were measured from a nationally representative sample of NSLP applications that were independently verified for the APEC study.¹ Our analysis file is based on the public-access file delivered under the APEC contract. The public file, however, contains only the total certification error measure. Measures of household reporting error and administrative error were added to the analysis file after constructing these measures from student-level files archived by Mathematica. Additional LEA characteristics were added to the file from supplementary data sources, described below.

RORA_analysis contains records from three school-year samples of NSLP applications selected for the **Regional Office Review of Applications (RORA) for School Meals**. Each year since SY2004-05, the Food and Nutrition Service examines administrative error incurred during the local educational agency's (LEA) approval process of applications for free and reduced-price meals in the National School Lunch Program (NSLP). Three years of data were available at the time that this study began compiling analysis files. For each school year, the original RORA files from FNS contain samples of approximately 50 NSLP applications from each of 56 LEAs selected for review. The **RORA_analysis** file constructed for this study includes one record for each public LEA, after aggregation of the application-level data into measures of the percents of applications with errors. Measures of LEA characteristics from supplementary data sources were added to the base RORA LEA-level files.

¹ U.S. Department of Agriculture, Food and Nutrition Service. NSLP/SBP Access, Participation, Eligibility, and Certification Study – Erroneous Payments in the NSLP and SBP, Vol. I: Study Findings, by Michael Ponza, et al. Project Officer: John R. Endahl. Alexandria, VA: 2007.

VSR_analysis contains records of all public school food authorities (SFAs) reporting data to the FNS-742 Verification Summary Report (VSR) in each of five school years.² The FNS-742 collects information from SFAs on the number of schools operating the NSLP or School Breakfast Program (SBP), enrollment in those schools, numbers of applications and student approved eligible for free and reduced-price meal benefits, number of applications selected for verification, and outcomes of the verification process. Unfortunately, VSR measures of certification error are not precise and unbiased because they are usually based on very small nonrandom samples.³ Measures of SFA characteristics from supplementary data sources were added to the base VSR files.

Table 1. Analysis Files for Modeling of High Risk Indicators of NSLP Certification Error

	Analysis Files		
	APEC_Analysis	RORA_Analysis	VSR_Analysis
Number of observations	87	156	67,234
Number of variables	122	105	111
Unit of observation	SFA	SFA-year	SFA-year
School years	SY2005-06	SY2004-05 SY2005-06 SY2006-07	SY2004-05 SY2007-08 SY2005-06 SY2008-09 SY2006-07
Primary data source	Subset of variables from the final public-access APEC SFA file, plus measures from archived student-level files.	Constructed from RORA school year files of sampled applications, aggregated to the SFA-level.	Includes all public SFAs reported to the FNS-742 Verification Summary Report (VSR).
Measures of NSLP certification error	Administrative error Household reporting error Total certification error	Administrative error	Total certification error ^a
Supplementary data sources ^b	VSR, CCD, LAUS, SAIPE	VSR, CCD, LAUS, SAIPE, FNSND	CCD, LAUS, SAIPE, FNSND

^a Total certification error measured in the VSR is not a precise and unbiased estimate because most SFAs have small numbers of applications in their verification sample and most SFAs are required to select a nonrandom sample.

^b The acronyms for supplementary data sources are defined in Table 2.

² SFA and LEA are used interchangeably to refer to school districts. Some SFAs, however, operate or report on school foodservice operations for multiple LEAs and SFA ID numbers maintained by State Child Nutrition Agencies do not always correspond with LEA ID numbers maintained by State Education Agencies. This study developed a “VSR-CCD Linkfile” to match of VSR data with the Common Core Data maintained by the National Center for Education Statistics.

³ FNS requirements for selecting verification samples have changed over time and will be fully documented in the study’s final report.

II. MEASURES FROM SUPPLEMENTARY DATA SOURCES

The three primary data sources (APEC, RORA, and VSR) for this study were each supplemented with SFA characteristics from secondary datasets. These data sources are listed in table 2, along with a list of measures used for this study.

III. CONSTRUCTION OF ANALYSIS FILES

The final analysis files were constructed to contain data at the SFA-level. Data from the supplementary data sources were matched to SFAs in the VSR data as follows:

- Common Core Data were matched to SFAs using the VSR-CCD Linkfile delivered to FNS under this contract. Most SFAs are matched to CCD data on a one-to-one basis. Approximately two percent of CCD records were aggregated prior to the match with VSR files to account for SFAs that administer school food service for multiple LEAs.
- SAIPE school district data contain the same LEAID as CCD data and were matched to SFAs in the VSR via the VSR-CCD linkfile. The percentage of LEAs that did not appear in the school district SAIPE file ranged from 7.4 in SY2004-05 to 10.5 in SY2008-09, reflecting the growth in charter schools. SAIPE county data were matched to all SFAs that were not matched to SAIPE school district data.
- LAUS data were matched to SFAs by county (the county was identified from CCD data). The monthly LAUS unemployment rates were averaged over the calendar year corresponding to the start of the school year. (For SY2006-07, unemployment is measured for calendar year 2006.)
- The FNS National Data File was matched to SFAs by State. State meals counts from this file were used to impute SFA meal counts based on SFA enrollment by meal certification status. No covariates were constructed based on these data.

Table 2. Covariates Constructed from Supplementary Data Sources

Data Source	SFA Characteristics Used as Covariates for Modeling High Risk Indicators of Certification Error
Common Core of Data LEA Universe Survey (CCD-US)	• NUS_LEAADM – number of LEA administrators • NUS_LEAADM_PERST – number of LEA administrators per student • NUS_LEASUP – number of LEA support staff • NUS_LEASUP_PERST – number of LEA support staff per student • NUS_SCHADM – number of school administrators • NUS_SCHADM_PERST – number of school administrators per student • NUS_TOTTCH – total FTE teachers • NUS_TOTTCH_PERST – total FTE teachers per student • NUS_MEMBER – total number of students in the LEA
Common Core of Data LEA Finance Survey (CCD-FS)	• NFS_FSSSPEND – Current expenditures for food services • NFS_FSSSPEND_PERST – Current expenditures for food services, per student • NFS_EXPLABORBUS_PERST – Labor cost for support services (business, central, and other) for salaries & benefits, per student • NFS_FSSSALSPEND – Labor cost for food services for salaries & benefits • NFS_FSSSALSPEND_PERST – Labor cost for food services for salaries & benefits, per student

Table 2. Covariates Constructed from Supplementary Data Sources - *Continued*

Data Source	SFA Characteristics Used as Covariates for Modeling High Risk Indicators of Certification Error
Common Core of Data Public Elementary/Secondary School Universe Survey (CCD-SUS) [School-level data were aggregated to the district level before adding supplementary measures to the analysis files]	· NSS_SCH – Number of schools in the district · NSS_STUD_PERSCH – Avg number of students per school · NSS_RURAL, NSS_SUBURBAN., NSS_TOWN, NSS_URBAN – number of schools by type of geographic area · NSS_ASIAN_DST, NSS_BLACK_DST, NSS_HISP_DST, NSS_WHITE_DST – number of students by race in the district · NSS_PCT_ASIAN, NSS_PCT_BLACK, NSS_PCT_HISP, NSS_PCT_WHITE – percent of students by race in the district · NSS_MIGRNT – number of migrant students in the district · NSS_MIGRNT_PERST – number of migrant students as a fraction of all students · NSS_FRELCH_DST, NSS_REDLCH_DST – number of free and RP approved students in the district · NSS_FRELCH_PCT, NSS_REDLCH_PCT – percent of free and RP approved students in the district
Small Area Income and Poverty Estimates for School Districts (SAIPE)	· CD_POV5TO17 – Number of children age 5 to 17 estimated to be in poverty, in the school district’s geographic area. · CD_POVRATIO517 – Percentage of children age 5 to 17 estimated to be in poverty, in the school district’s geographic area.
Small Area Income and Poverty Estimates for Counties (SAIPE)	Same measures as for School District SAIPE. · County measure is used when SAIPE does not have a school district measure because the LEA does not have a defined geographic jurisdiction (e.g., charter schools).
Local Area Unemployment Statistics (LAUS)	· BLS_UNEMPLOYMENT_RATE –Average annual county-level unemployment rate
